

## **A Summary of A Discussion Meeting on Frontier Theories of Technical Economics and Significant Practical Problems**

*The Journal of Quantitative and Technical Economics* (JQTE) held a discussion meeting on frontier theories of technical economics and significant practical problems in June 9<sup>th</sup>, 2014 in Beijing. It aims to coordinate with an innovative engineering project of Chinese Academy of social Sciences and help of the National Social Science Fund.

Scholars had a heated freely discussion on frontier theories of technical economics and significant practical problems, such as eco-civilization construction, innovation-driven development, adjustment in economy structure, development of green economy, development of cyclic economy, innovation in technology and management, governing haze weather in mega cities and the new energy strategy. They repeatedly demonstrated, chose and announced 15 critical projects on the field of technical economics to society. Paper submissions on these are welcomed.

It's agreed that the real study on economics is non-utilitarian and altruistic in the conference. Human society makes progress while new problems arise in economical development. Therefore, the study of economics is facing challenges. It's necessary for economists and researchers to follow the times closely and focus on significant practical problems during process of China's economical development. What's more, research findings should covey development of the society and scientific spirit and value. They work for the society, human and decision-making of communist party and government.

The conference stresses the publications will focus on theoretical and practical significance so that the essays must cover lofty concepts, distinct opinions, efficient evidence, rich content and profound thoughts which reflect fully the author's visions and insights.
