

### **To Dear Authors (3)**

#### **——What Should Be Taken Attention In Analysis?**

Reliable evidence, scientific analysis and precise demonstration are symbols of superb academic writing. We would like to remind authors:

First, Never use obsolete statistics and try to use up-to-date the timeline;

Second, It's necessary to analyze a problem in profound and comprehensive details. Suggestions must be concrete and feasible instead of excessively simple;

Third, Try not to draw excessively simple conclusions without reviewing foregoing investigation, give a conclusion before demonstration, or assert that the hypothesis is proved true after proposing it.
